

## Q and A – online operation of the competition

The main objective of this competition is to hold a shooting sport event under this Covid-19 pandemic. Therefore, the regulation applied to the operation will be tolerant compared to the regular competition. The results of this competition would be a reference record, and not an official record which can overwrite the records of the past years.

For example, the time limit of the series cannot be fully controlled and applied by the CRO, because there is a lag time will occur due to the internet connection. The fairness between each range will rely on the Juries.

### 1) **Whether gathering in one place is necessary**

Gathering in one place per country is basically necessary, because the more ranges we need, the work of RO and the risk of connection issues multiplies.

### 2) **Necessity and operation plan of equipment control**

If the athlete has the ISSF tag on the equipment, there is no need to go through EC.

For others, please have each ISSF jury on the range check the equipment before the completion. There will be no post competition check.

### 3) **Organization and roles of judges**

1 ISSF licensed judge per range. That jury will ensure the range and the athletes follow the ISSF rules.

### 4) **Necessity and Operation of target testing**

The jury on that range could decide if they should conduct the target testing.

As long as the jury is comfortable of ensuring the movement of the target, the test is not compulsory.

### **5) Inclusion of Team Events and Mixed Team Events**

Teams events will be conducted. The scores of the qualification's individual event will be added to decide the team score

No mixed team events.

### **6) Management when disconnection of the streaming**

We understand that avoiding the disconnection would be the main issue. The prerequisite of the ranges would be having a strong and steady internet connection.

1 person from each range would be assigned to send the results to the HQ via WhatsApp. We will make a WhatsApp group chat among those range officers.

### **7) Whether EST brand has to be the same**

If possible, we would like to have all ranges use SIUS system.  
Please let us know if there are any difficulties.
